CLINICALLY AFFECTED for conditions NOT currently known or proven to be inherited in the breed examined:

Table with 4 columns of conditions and checkboxes. Checked conditions include: Distichiasis, Ectopic cilia, Entropion, Ectropion, Multi-ocular defects, Corneal lipid deposition, Persistent pupillary membrane, Abnormal pigment deposition, Goniodysgenesis, Primary lens luxation, PHPV, Other conditions (specify), Nuclear cataract, Posterior polar sub-capsular cataract, Other cataract, Optic nerve hypoplasia, Posterior segment coloboma, Choroidal hypoplasia, Multifocal retinal dysplasia, Total retinal dysplasia, GPRA-like appearance, Central PRA-like lesions.

INHERITED EYE DISEASE STATUS – SCHEDULE A BREEDS ONLY

This section applies only to those conditions in the breeds specified in Schedule A of the Procedure Notes current on the day of examination. These results will be sent to the Kennel Club and/or ISDS as appropriate.

Table with 5 columns: CONGENITAL, CLINICALLY UNAFFECTED, CLINICALLY AFFECTED, NON-CONGENITAL, CLINICALLY UNAFFECTED, CLINICALLY AFFECTED. Rows include (CEA) Collie eye anomaly, (MRD) Multifocal retinal dysplasia, (TRD) Total retinal dysplasia, (CHC) Congenital hereditary cataract, (PHPV) Persistent hyperplastic primary vitreous, (G) Goniodysgenesis, (GPRA) Generalised progressive retinal atrophy, (CPRA) Central progressive retinal atrophy, (HC) Hereditary cataract, (PLL) Primary lens luxation, (POAG) Primary open angle glaucoma.

The age of onset of non-congenital inherited eye disease varies in different breeds and between individual dogs. It is therefore important to follow any advice given at the time of this examination with regard to the necessity for and frequency of eye examination under the Scheme.

Retesting under the BVA/KC/ISDS scheme advised in \_\_\_\_\_

I have today examined the above animal under the BVA/KC/ISDS eye scheme with the results as shown

I agree that all information may be used in confidence by veterinary surgeons and geneticists researching the problem of heart murmurs in Cavaliers.	
Owner's Signature: 	Colour <i>RUBY</i>
Date <i>05/08/2015</i>	

The Club publishes a list of dogs and bitches aged five years and older that are free of MVD. This is to assist breeders wishing to comply with the guidelines for improving the health of the breed. Your co-operation is earnestly requested. If you DO NOT wish the name of your dog to be included on this list, please initial this box.

### NOTE FOR VETERINARY SURGEONS.

It has been shown in many countries that degenerative valve disease is very common in Cavalier King Charles spaniels and can lead to heart failure and death. While modern medications can increase longevity and improve quality of life, once heart failure develops, it is still distressing for the owners and the dogs. Murmurs have been shown to be strongly inherited and breeding from dogs that develop a murmur later in life will increase the age at which subsequent litters develop murmurs. Hence all breeding dogs should be examined annually until at least 5 years old. The current guidelines advise breeders to use dogs who are clear of a murmur at 5 years. Younger dogs can be used if BOTH parents were clear at 5 years. A list of dogs that are clear of murmurs at 5 years is regularly published.

The murmur of mitral regurgitation is systolic, loudest caudally on the left side. Grade 1 murmurs are detected after listening for several minutes in a quiet room. Grade 2 murmurs are heard immediately but are quieter than the heart sounds (S1 and S2) with grade 3 murmurs as loud as and grade 4 murmurs louder than the heart sounds.

We would be grateful if you could complete the form for the dog presented indicating whether or not, in your opinion, a murmur consistent with mitral regurgitation was audible and if possible the grade. The scheme is supported by the Kennel Club and the Veterinary Cardiovascular Society.

Thank you for your assistance.

*Registered Name:* Svena Summer Knight at Donrobby

*Registration Number:* AR01301304

*Microchip/Tattoo Number:* 981000006606264

*Breed:* **CAVALIER KING CHARLES SPANIEL**

This dog is CLEAR of curly coat dry eye syndrome.

*Authentication code:* AC4721748

---

*Explanation of terms:*

CLEAR: these dogs have two normal copies of DNA. Clear dogs will not be affected by Dry Eye Curly Coat Syndrome as a result of the associated mutation identified. We cannot exclude the possibility that some dogs may develop non-congenital forms of ichthyosis or dry eye which have a different genetic basis from Curly Coat Dry Eye syndrome
